Chris,

The RRC does not regulate tank reconditioning. Also, cleanup of the contaminated soil below the tanks (even if the tanks stored crude oil) does not fall under the jurisdiction of the RRC because the facility was a refinery.

(RULE §3.30, **Memorandum of Understanding** between the Railroad Commission of **Texas (RRC)** and the **Texas** Commission on Environmental Quality (**TCEQ**))

Thanks,
Heidi

Chris,

I am forwarding your email to Heidi Bojes and David Cooney. They are familiar with the site and will be able to assist.

Have a nice weekend,
Aimee

Subject: Falcon Refinery - Tank reconditioning

Aimee-

EPA is currently working with a PRP to conduct an ongoing cleanup at the Falcon Refinery located in Ingleside, TX. This is the same location that Superior Crude operates a crude oil storage terminal that had EPA and RRC interaction due to a large oil spill. The owner of the property has advised us they would like to place other storage tanks (not currently being operated by Superior) back into service. Currently none of the tanks are fit for service according to the owner and they have indicated that there exists contaminated soil below the tanks. Do you know if RRC could have any role in either the cleanup or tank reconditioning? Gary Moore is the OSC assigned to the site. He can be reached at (214) 789-1627. Thanks
